

Update your PFAFF® CREATIVE VISION™ sewing and embroidery machine

We strongly recommend you always update your CREATIVE VISION™ sewing and embroidery machine with the latest software version.

The new software version includes new features and software improvements, which are all to the benefit of the user and the machine.

creative™ AIR HOOP

Hooping delicate, specialty fabrics with the creative™ AIR HOOP gives the best hooping result ever. Even the most delicate and thin fabrics like organza and silk-satin are quickly and gently set in place and taut, without leaving any pressure marks on the fabric. The creative™ AIR HOOP is easily inflated with a special foot pedal that is included with the hoop which leaves both hands free for handling the fabric. Update your CREATIVE VISION™ sewing and embroidery machine and it will recognize the creative™ AIR HOOP as well as all other Pfaff hoops.

Precise positioning

The fabulous precise positioning feature is developed even further. You can zoom in and just click directly on the exact point you want to use as the positioning point without drag and drop the cross mark to the positioning point. This will make precise positioning even easier to use!

More languages

The CREATIVE VISION™ sewing and embroidery machine now supports even more languages. The new software version contains 4 new languages; Russian, Spanish, Portuguese and Turkish.

Increased embroidery speed

The embroidery speed is increased for all hoops with the same beautiful embroidery quality. The increased embroidery speed will give you more time for fun creative work.

Stitch optimization

Some smaller changes have been done on stitches (e.g. change of default length or default width) to give the best result when sewing.

Software improvements

Minor software changes have been done in this new version from consumer requests. Thank you for your feedback and ideas! Please continue to give us your suggestions; they are very helpful to make the best sewing and embroidery machine in the world.
